DETAILED ACTION

This is in response to amendment filed on 12/20/04 in which claims 1-18 are pending. The applicant's amendments have been fully considered therefore this case is in condition for allowance.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior arts of record fails to anticipate or render obvious the following recited features: A set circuit which includes a first counter for counting a reference clock signal to generate a count value and clearing its own count value in response to the first detection signal, wherein the set circuit generates a set signal if the count value reaches the number of the reference clock signals corresponding to the delay period of time as recited in claims 1, 7 and 13. A read counter which counts the reference clock signal to generate a read count value, and resets its own read count value at a second initial value in response to the system reset signal, wherein the second initial value has a difference of a value added one to the number of the reference clock signals corresponding to the delay period of time between the first initial value as recited in claims 5, 11 and 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yokomizo U.S. Patent No 6,130,566 teaches a digital wave shaping circuit.

Kang U.S. Patent no 6,404,458 B1 teaches an apparatus for converting screen aspect ratio.
